

UPDATE INSTRUCTIONS

- Please note that all computers must be out of the software while the update is being run.
- If you have multiple computers this must first be run on the server. Once the server is updated you must run the software for the first time prior to updating the workstation.

1. Right click on your Prosolutions shortcut on your desktop and left click on "Properties."

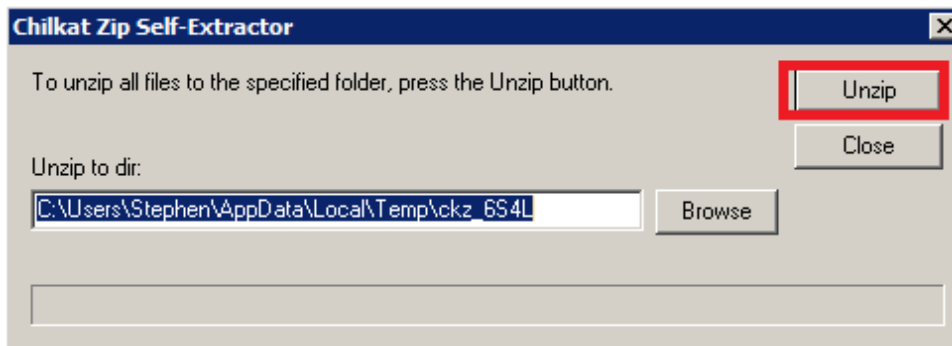

2. Confirm the "Start In." Remember this because this may be needed for the update.

3. Double left click on the update.

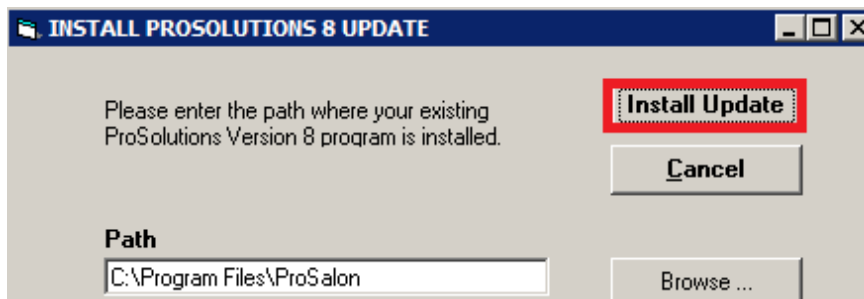

4. In the "Self Extractor" screen left click the "unzip" button.

5. Now confirm that the install path is the same as what was in the "Start In" that we did in step 1. If it is not, change the path to what the "Start In" has listed. Do not include the quotations.

6. Once that is done click the "Update" button.
